**Objects Of Change** - J. Daniel Rogers - 1990

**Objects Of CHANGE** - David L. Correll - 1990-10-17

Rogers (assoc. curator of archaeology, National Museum of Natural History) explores the contact experience of this Northern Plains Indian tribe as an interactive process conditioned by the cultural values and logic of the Arikaras as well as the Euro-Americans, and examines the extent to which changes in the Arikara material record are associated with changes in known historical events and processes. **Change and Archaeology** - Rachel J. Crellin - 2020-05-14

Change and Archaeology explores how archaeologists have historically described, interpreted, and explained change, and argues that change has been under-theorised. The study of change is central to the discipline of archaeology, but change is complex, and this makes it challenging to write about in nuanced ways that effectively capture the nature of our world. Relational approaches offer archaeologists more scope to explore change in complex and subtle ways. Change and Archaeology presents a posthumanist, post-anthropocentric, new materialist approach to change. It argues that our world is constantly in the process of becoming and always on the move. By recasting change as the norm rather than the exception and distributing it between both humans and non-humans this book offers a new theoretical framework for exploring change in the past that allows us to move beyond block-time approaches where change is located only in transitional moments and periods are characterised by blocks of stasis. Archaeologists, scholars, anthropologists and historians interested in the theoretical frameworks we use to interpret the past will find this book a fascinating new insight into the way our world changes and evolves. The approaches presented within will be of use to anyone studying and writing about the way societies and their environs move through time.

potential of using archaeology to remember and tell colonial histories. This can be inferred through systematic, empirical analysis. Expanding Archaeology begins with three retrospective analyses by J. A third section contains five critiques that serve as a counterpoint to the behavioral approach. Although the editors do not suggest that behavioral archaeology should be the universal archaeology, they do suggest that this approach permits pre-historians to expand into new areas of investigation.

Expanding Archaeology - James M. Skibo - 1995-07

Expanding Archaeology is the first attempt to define behavioral archaeology comprehensively and to establish its place among competing theoretical frameworks. Among other objectives, this volume demonstrates that a behavioral approach—the study of material objects regardless of time or space to describe and explain human behavior—provides a means whereby religion, gender, and other seemingly unknowable elements of prehistory can be inferred through systematic, empirical analysis. Expanding Archaeology begins with three retrospective analyses by J. This book analyses in detail the funerary evidence from burial sites in southern and central Sardinia, proposing an alternative interpretation of the island and of other Roman Provinces in which local communities played an active and creative role in shaping back the Roman-world within the specific material and historical conditions they lived in.

The Anthropology of Knowledge - Michel Foucault - 2012-07-11

Madness, sexuality, power, knowledge—are these facts of life or simply parts of speech? In a series of works of astonishing brilliance, historian Michel Foucault excavated the hidden assumptions that govern the way we live and the way we think. The Archaeology of Knowledge begins at the level of “things aid” and moves quickly to illuminate the connections between knowledge, language, and action in a style at once profound and personal. A summing up of Foucault’s own methodological assumptions, this book is also a first step toward a genealogy of the way we live now. Challenging, at times infuriating, it is an absolutely indispensable guide to one of the most innovative thinkers of our time.

Routledge Handbook of the Archaeology of Indigenous-Colonial Interaction in the Americas - Lee M. Panich - 2021-07-19

The Routledge Handbook of the Archaeology of Indigenous-Colonial Interaction in the Americas brings together scholars from across the hemisphere to examine how archaeology can highlight the myriad ways that Indigenous people have negotiated colonial systems from the fifteenth century through to today. The contributions offer a comprehensive look at where the archaeology of colonialism has been and where it is heading. Geographically diverse case studies highlight longstanding theoretical and methodological issues as well as emerging topics in the field. The organization of chapters by key issues and topics, rather than by geography, fosters exploration of the commonalities and contrasts between historical contingencies and scholarly interpretations. Throughout the volume, Indigenous and non-Indigenous contributors grapple with the continued colonial nature of archaeology and highlight Native perspectives on the potential of using archaeology to remember and tell colonial histories. This volume is the ideal starting point for students interested in how archaeology can illuminate Indigenous agency in colonial settings. Professionals, including academic and cultural resource management archaeologists, will find it a convenient reference for a range of topics related to the archaeology of colonialism in the Americas.

In Defense of Things - Bjornar Olsen - 2010-07-16

In much recent thinking, social and cultural realms are thought of as existing prior to—or detached from—things, materiality, and landscape. It is often assumed, for example, that things are entirely ‘constructed’ by social or cultural perceptions and have no existence in and of themselves. Bjornar Olsen takes a different position. Drawing on a range of theories, especially phenomenology and actor-network-theory, Olsen claims that human life is fully mixed up with things and that humanity and human history emerge from such relationships. Things, moreover, possess unique qualities that are inherent in our cohabitation with them—qualities that help to facilitate existential security and memory of the past. This important work of archaeological theory challenges us to reconsider our ideas about the nature of things, past and present, demonstrating that objects themselves possess a dynamic presence that we must take into account if we are to understand the world we and they inhabit.

The Archaeology of Contextual Meanings - Ian Hodder - 1987-08-06

This companion volume to Archaeology as Long-term History focuses on the symbolism of artefacts. It seeks at once to refine the theory and method relating to interpretation and show, with examples, how to conduct this sort of archaeological work. Some contributors work with the material culture of modern times or the historic period, areas in which the symbolism of mute artefacts has traditionally been thought most accessible. However, the book also contains a good deal of discussion and application of the theory to demonstrate the feasibility of symbolic interpretation where good contextual data survive from the distant past. In relation to wider debates within the social sciences,
and everyday life. Via a series of archaeological, anthropological and within their historical context and within the contexts of social actions. In this respect, it develops further some of the ideas presented in Dr Hodder’s Symbolic and Structural Archaeology, an earlier volume in this series.

Some contributors work with the material culture of modern times or the historic period, areas in which the symbolism of mute artefacts has traditionally been thought most accessible. However, the book also contains a number of applications in prehistory to demonstrate the feasibility of symbolic interpretation where good contextual data survive from the distant past. In relation to wider debates within the social sciences, the volume is characterised by a concern to place abstract symbolic codes within their historical context and within the contexts of social actions. In this respect, it develops further some of the ideas presented in Dr Hodder’s Symbolic and Structural Archaeology, an earlier volume in this series.

This book investigates the added value that satellite technologies and remote sensing can provide for a more sustainable mapping, monitoring and management of heritage sites, be it for purposes of regular maintenance or for risk mitigation in case of natural or man-caused hazards. One of the major goals of this book is to provide a clear overview on policy perspectives, regarding both space policy as well as heritage policy, and to provide possible suggestions for common ground of these two fields, in Europe and around the world. Readers will develop a good understanding of cutting-edge applications of remote sensing and geographic information science, and the challenges that affect heritage maintenance and protection. Particular attention is given to Earth observation and remote sensing techniques applied in different locations. This book brings together innovative technologies, concrete applications and policy perspectives that can lead to a more complete vision of cultural heritage as a resource for future development of our society as a whole.

**Unit Issues in Archaeology** - Ann Felice Ramenofsky - 1998
This volume emphasizes one aspect of scientific method: units of measure and their construction as applied to archaeology. Attributes, artifact classes, locational designations, temporal periods, sampling universes, culture stages, and geographic regions are all examples of constructed units.

**Playing with Things: The archaeology, anthropology and ethnography of human-object interactions in Atlantic Scotland** - Graeme Wilson - 2018-12-31
This study represents a reappraisal of the relationship between play — an activity which is most often understood in terms of something ‘set apart’ — and everyday life. Via a series of archaeological, anthropological and within their historical context and within the contexts of social actions. In this respect, it develops further some of the ideas presented in Dr Hodder’s Symbolic and Structural Archaeology, an earlier volume in this series.

**Archaeology After Interpretation** - Benjamin Alberti - 2016-06-16
A new generation of archaeologists has thrown down a challenge to post-processual theory, arguing that characterizing material symbols as arbitrary overlooks the material character and significance of artifacts. This volume showcases the significant departure from previous symbolic approaches that is underway in the discipline. It brings together key scholars advancing a variety of cutting edge approaches, each emphasizing an understanding of artifacts and materials not in terms of symbols but relationally, as a set of associations that connect people to the material world. Authors draw on a diversity of intellectual sources and case studies, paving a dynamic road ahead for archaeology as a discipline and theoretical approaches to material culture.

**Archaeology as Long-Term History** - Ian Hodder - 1987-08-06

**An Archaeology of Early Christianity in Vanuatu** - James L. Flexner - 2016-12-19
Religious change is at its core a material as much as a spiritual process. Beliefs related to intangible spirits, ghosts, or gods were enacted through material relationships between people, places, and objects. The archaeology of mission sites from Tanna and Erromango islands, southern Vanuatu (formerly the New Hebrides), offer an informative case study for understanding the material dimensions of religious change. One of the primary ways that cultural difference was thrown into relief in the Presbyterian New Hebrides missions was in the realm of objects. Christian Protestant missionaries believed that religious conversion had to be accompanied by changes in the material conditions of everyday life. Results of field archaeology and museum research on Tanna and Erromango, southern Vanuatu, show that the process of material transformation was not unidirectional. Just as Melanesian people changed religious beliefs and integrated some imported objects into everyday life, missionaries integrated local elements into their daily lives. Attempts to produce ‘civilised Christian natives’, or to change some elements of native life relating purely to ‘religion’ but not others, resulted in a transformed ‘hybrid’ form. This is visible in the continuity of a variety of traditional practices subsumed under the umbrella term ‘kastom’ through to the present alongside Christianity. Melanesians didn’t become Christian, Christianity became Melanesian. The material basis of religious change was integral to this process.

Archaeology: Principles and Practice' offers a broad overview of the field of remote sensing and archaeology. The book will be invaluable to students of behavioral archaeology, offering perspectives on the current state of research and collectively outlining future directions for the field. The broad range of topics covered in this volume allows for specificity within individual chapters, while building to a cumulative overview of the field of historical archaeology as it stands, and where it could go next. Archaeological research is discussed in the context of current sociological concerns, different approaches and techniques are assessed, and potential advances are posited. This is a comprehensive treatment of the sub-discipline, engaging key contemporary debates, and providing a series of specially-commissioned geographical overviews to complement the more theoretical explorations. This book is designed to offer a starting point for students who may wish to pursue particular topics in more depth, as well as for non-archaeologists who have an interest in historical archaeology.

Remote Sensing in Archaeology - Jay K. Johnson - 2006-03-19

The coming of age of a technology first developed in the 1950s. All the money spent by the United States space program is not spent looking at the stars. NASA is composed of a vast and varied network of scientists across the academic spectrum involved in research and development programs that have wide application on planet Earth. Several of the leaders in the field of remote sensing and archaeology were recently brought together for a NASA-funded workshop in Biloxi, Mississippi. The workshop was organized specifically to show these archaeologists and cultural resource managers how close we are to being able to "see" under the dirt in order to know where to excavate before ever putting a shovel in the ground. As the book that resulted from this workshop demonstrates, this fantasy is quickly becoming a reality. In this volume, eleven archaeologists reveal how the broad application of remote sensing, and especially geophysical techniques, is altering the usual conduct of dirt archaeology. Using case studies that both succeeded and failed, they offer a comprehensive guide to remote sensing techniques on archaeological sites throughout North America. Because this new technology is advancing on a daily basis, the book is accompanied by a CD intended for periodic update that provides additional data and illustrations. with contributions by: R. Berle Clay, Lawrence B. Conyers, Rinita A. Dalan, Marco Giardino, Thomas J. Green, Michael L. Hargrave, Bryan S. Haley, Kay J. Johnson, Kenneth L. Kvaamme, J. J. Lockhart, Lewis Somers

Behavioral Archaeology - Michael B. Schiffer - 2016-04-08

Behavioral archaeology offers a way of examining the past by highlighting human engagement with the material culture of the time. 'Behavioral Archaeology: Principles and Practice' offers a broad overview of the methods and theories used in this approach to archaeology. Opening with an overview of the history and key concepts, the book goes on to systematically cover both principles and practice: the philosophy of science and the scientific method; artifacts and human behavior; archaeological inference; formation processes of the archaeological record; technological change; behavioral change; and ritual and religion. Detailed case studies show the relevance of behavioral method and theory to the wider field of archaeological studies. The book will be invaluable to students of

The Routledge Handbook of Global Historical Archaeology - Charles E. Orser, Jr. - 2020-07-26

An Archaeology of Identity - Andrew Gardner - 2016-09-16

What happened to Roman soldiers in Britain during the decline of the empire in the 4th and 5th centuries? Did they withdraw, defect, or go native? More than a question of military history, this is the starting point for Andrew Gardner’s incisive exploration of social identity in Roman Britain, in the Roman Empire, and in ancient society. Drawing on the sociological theories of Anthony Giddens and others, Gardner shapes an approach that focuses on the central role of practice in the creation and maintenance of identities—nationalist, gendered, class, and ethnic. This theory is then tested against the material remains of Roman soldiers in Britain to show how patterning of stratigraphy, architecture, and artifacts supports his theoretical construct. The result is a retelling of the story of late Roman Britain sharply at odds with the traditional text-driven histories and a theory of human action that offers much to current debates across the social sciences.

Archaeology to Delight and Instruct - Heather Burke - 2016-09-16 This book presents novel and interesting ways of teaching archaeological concepts and processes to college and university students. Seeking alternatives to the formal lecture format, the various contributions seek better ways of communicating the complexities of human behavior and of engaging students in active learning about the past. This collection of imaginative exercises designed by 20 master instructors on three continents includes role-playing, games, simulations, activities, and performance, all designed to teach archaeological concepts in interesting and engaging ways.

Art, Artefacts and Chronology in Classical Archaeology - William R. Biers - 2012-11-12 The museums of the world are full of statues and other artefacts of the Greeks and the Romans. All are given a date. But how are these dates arrived at? What is the evidence? This study provides the student with an introduction and explanation of the ways scholars date the archaeological remains of classical antiquity. Specific examples from architecture, sculpture, and painting are presented, and the different methods of dating them are explained. These are supplemented with many original photographs and drawings. Old, and not so old problems in chronology are thus investigated and new theories reviewed from a fresh perspective.

Changing Perspectives on the Archaeology of the Central Mississippi Valley - Society for American Archaeology. Meeting - 1998-03-25 Fourteen experts examine the current state of Central Valley prehistoric research and provide an important touchstone for future archaeological study of the region. The Mississippi Valley region has long played a crucial role in the development of American archaeology and continues to be widely known for the major research of the early 1950s. To bring the archaeological record up to date, fourteen Central Valley experts address diverse topics including the distribution of artifacts across the landscape, internal configurations of late prehistoric settlements, human-bone chemistry, and ceramic technology. The authors demonstrate that much is to be learned from the rich and varied archaeological record of the region dramatically over the past half century. Operating at the cutting edge of current research strategies, these archaeologists provide a fresh look at old problems in central Mississippi Valley research.

Archaeological Artefacts as Material Culture - Linda Hurcombe - 2014-05-12 This book is an introduction to the study of artefacts, setting them in a social context rather than using a purely scientific approach. Drawing on a range of different cultures and extensively illustrated, Archaeological Artefacts and Material Culture covers everything from recovery strategies and recording procedures to interpretation through typology, ethnography and experiment, and every type of material including wood, fibers, bones, hides and adhesives, stone, clay, and metals. With over seventy illustrations with almost fifty in full colour, this book not only provides the tools an archaeologist will need to interpret past societies from their artefacts, but also a keen appreciation of the beauty and tactility involved in working with these fascinating objects. This is a book no archaeologist should be without, but it will also appeal to anybody interested in the interaction between people and objects.

Assemblage Thought and Archaeology - Ben Jervis - 2018-12-07 Examinations of prehistoric burial to understanding post-industrial spaces and heritage practices, the writing of Gilles Deleuze and Felix Guattari is gaining increasing importance within archaeological thought. Their concept of ‘assemblages’ allows us to explore the past in new ways, by placing an emphasis on difference rather than similarity, on fluidity rather than stasis and unpredictability rather than reproducible models. Assemblage Thought and Archaeology applies the notion of assemblage to specific archaeological case studies, ranging from early urbanism in Mesopotamia to 19th century military fortifications. It introduces the concept of assemblage within the context of the wider ‘material turn’ in the social sciences, examines its implications for studying materials and urban settlements, and explores its consequences for the practice of archaeological research and heritage management. This innovative book will be of particular interest to postgraduate students of archaeological theory and researchers looking to understand this latest trend in archaeological thought, although the case studies will also have appeal to those whose work focusses on material culture, settlement archaeology and archaeological practice.

The Archaeology of Seeing - Liliana Janik - 2020-02-20

The Archaeology of Seeing provides readers with a new and provocative understanding of material culture through exploring visual narratives captured in cave and rock art, sculpture, paintings, and more. The engaging argument draws on current thinking in archaeology, on how we can interpret the behaviour of people in the past through their use of material culture, and how this affects our understanding of how we create and see art in the present. Exploring themes of gender, identity, and story-telling in visual material culture, this book forces a radical reassessment of how the ability to see makes us and our ancestors human; as such, it will interest lovers of both art and archaeology. Illustrated with examples from around the world, from the earliest art from hundreds of thousands of years ago, to the contemporary art scene, including street art and advertising, Janik cogently argues that the human capacity for art, which we share with our most ancient ancestors and cousins, is rooted in our common neurophysiology. The ways in which our brains allow us to see is a common heritage that shapes the creative process; what changes, according to time and place, are the cultural contexts in which art is produced and consumed. The book argues for an innovative understanding of art through the interplay between the way the human brain works and the culturally specific creation and interpretation of meaning, making an important contribution to the debate on art/archaeology.

Archaeology - Clive Gamble - 2004

A must for anyone considering the study of archaeology, designed to provide the reader with everything they should know when embarking on an archaeological course, whether A Level or first year undergraduate.

Field Methods and Post-Excavation Techniques in Late Antique Archaeology - - 2015-06-12

Late antique sites are often excavated badly and are hardly ever published in full, especially in the East. This volume seeks to provide a critique of this situation and exemplars of best practice. It will be an important reference work for scholars engaged in fieldwork and those seeking to use archaeological evidence in historical discussions.

Archaeology in Latin America - Benjamin Alberti - 2005-08-16

This pioneering and comprehensive survey is the first overview of current themes in Latin American archaeology written solely by academics native to the region, and it makes their collected expertise available to an English-speaking audience for the first time. The contributors cover the most significant issues in the archaeology of Latin America, such as the domestication of camels, the emergence of urban society in Mesoamerica, the frontier of the Inca empire, and the relatively little known archaeology of the Amazon basin. This book draws together key areas of research in Latin American archaeological thought into a coherent whole; no other volume on this area has ever dealt with such a diverse range of subjects, and some of the countries examined have never before been the subject of a regional study.

The Oxford Handbook of North American Archaeology - Timothy Pauketat - 2015-04-01

This volume explores 15,000 years of indigenous human history on the North American continent, drawing on the latest archaeological theories, time-honored methodologies, and rich datasets. From the Arctic south to the Mexican border and east to the Atlantic Ocean, all of the major cultural developments are covered in 53 chapters, with certain periods, places, and historical problems receiving special focus by the volume's authors. Questions like who first peopled the continent, what did it mean to have been a hunter-gatherer in the Great Basin versus the California coast, how significant were cultural exchanges between Native North Americans and Mesoamericans, and why do major historical changes seem to correspond to shifts in religion, politics, demography, and economy are brought into focus. The practice of archaeology itself is discussed as contributors wrestle with modern-day concerns with the implications of doing archaeology and its relevance for understanding ourselves today. In the end, the chapters in this book show us that the principal questions answered about human history through the archaeology of North America are central to any larger understanding of the relationships between people, cultural identities, landscapes, and the living of everyday life.

The Theory and Practice of Archaeology - Thomas C Patterson - 2015-08-07
For courses in Introduction to Archaeology Theory and Methods. Intended for the Introductory Archaeology course with the goal of teaching students how to think like archaeologists, this workbook includes activities that challenge students to interpret and explain field findings and help them to see the link between theory and practice.

Conservation of Marine Archaeological Objects - Colin Pearson - 2014-05-20
Over the past twenty years there has been a significant increase in underwater activities such as scuba diving which, coupled with the adventure andromance always associated with shipwrecks, has led to rapid developments in the discovery and excavation of shipwrecked material. These shipwrecks are invaluable archaeological "time capsules", which in the majority of cases have come to an equilibrium with their environment. As soon as artefacts on the wreck site are moved, this equilibrium is disturbed, and the artefacts may commence to deteriorate, sometimes in a rapid and devastating fashion. In fact excavation without having conservation facilities available is vandalism—the artefacts are much safer being left on the sea bed. Such famous shipwrecks as the Mary Rose (1545), the Wasa (1628) and the Batabia (1629) have not only brought the world's attention to these unique finds, but have also produced tremendous conservation problems. The treatment of a 30 metre waterlogged wooden hull or large cast iron cannon is still causing headaches to conservators.

Archaeology of Households, Kinship, and Social Change - Lacey B. Carpenter - 2021-11-25
Archaeology of Households, Kinship, and Social Change offers new perspectives on the processes of social change from the standpoint of household archaeology. This volume develops new theoretical and methodological approaches to the archaeology of households pursuing three critical themes: household diversity in human residential communities with and without archaeologically identifiable houses, interactions within and between households that explicitly considers impacts of kin and non-kin relationships, and lastly change as a process that involves the choices made by members of households in the context of larger societal constraints. Encompassing these themes, authors explore the role of social ties and their material manifestations (within the house, dwelling, or other constructed space), how the household relates to other social units, how households consolidate power and control over resources, and how these changes manifest at multiple scales. The case studies presented in this volume have households create the contexts for change, and how households serve as spaces for invention, reaction, and/or resistance. Understanding the nature of relationships within households is necessary for a more complete understanding of communities and regions as these ties are vital to explaining how and why societies change. Taking a comparative outlook, with case studies from around the world, this volume will inform students and professionals researching household archaeology and be of interest to other disciplines concerned with the relationship between social networks and societal change.
