A revised version of Whittle's Neolithic Europe, reviewing new archaeological evidence.

Problems in Neolithic Archaeology - Alasdair Whittle - 1988
Problems in Neolithic Archaeology is a notable contribution to the debate about how we can write prehistory. Drawing on both processual and post-processual approaches, it reaffirms the central role of theory and interpretation while accepting as permanent the uncertainty which makes the testing of archaeological hypotheses difficult or even impossible. Dr Whittle asserts in particular the need for greater self-confidence and for the formulation of new theory and questions more appropriate to the archaeological record. The book's specific strength lies, however, in a close contextual study of the Neolithic period in western and central Europe. In this respect it provides an admirable complement to his textbook Neolithic Europe.

**European Prehistory** - Sarunas Milisauskas - 2012-12-06
Sarunas Milisauskas· 1.1
**INTRODUCTION** The purpose of this book is four-fold: to introduce English-speaking students and scholars to some of the outstanding archaeological research that has been done in Europe in recent years; to integrate this research into an anthropological frame of reference; to address episodes of culture change such as the transition to farming; the origin of complex societies, and the origin of urbanism, and to provide an overview of European prehistory from the earliest appearance of humans to the rise of the Roman empire. In 1978, the Academic Press published my book European Prehistory which, typically for that period, emphasized cultural evolution, culture process,
transition to farming; the
economy. To produce a new
version and an up-to-date
prehistory of Europe, I have
invited contributions from
specialists in the Palaeolithic,
Mesolithic, Bronze and Iron
Ages. Thus while this version
of European Prehistory is a
new book, however, it still
incorporates some data from
the 1978 version, particularly
in The Present Environment
and Neolithic chapters. Like
its predecessor, this edition is
structured around selected
general topics, such as
technology, trade, settlement,
warfare, and ritual.

INTRODUCTION The purpose
of this book is four-fold: to
introduce English-speaking
students and scholars to some
of the outstanding
archaeological research that
has been done in Europe in
recent years; to integrate this
research into an
anthropological frame of
reference; to address episodes
of culture change such as the
origin of complex societies,
and the origin of urbanism,
and to provide an overview of
European prehistory from the
earliest appearance of
humans to the rise of the
Roman empire. In 1978, the
Academic Press published my
book European Prehistory
which, typically for that
period, emphasized cultural
evolution, culture process,
technology, environment, and
economy. To produce a new
version and an up-to-date
prehistory of Europe, I have
invited contributions from
specialists in the Palaeolithic,
Mesolithic, Bronze and Iron
Ages. Thus while this version
of European Prehistory is a
new book, however, it still
incorporates some data from
the 1978 version, particularly
in The Present Environment
and Neolithic chapters. Like
its predecessor, this edition is
structured around selected
general topics, such as
technology, trade, settlement,
warfare, and ritual.

Anthropology at Harvard -
David L. Browman -
2013-05-27
The history of anthropology at Harvard is told through vignettes about the people, famous and obscure, who shaped the discipline at Harvard College and the Peabody Museum. The role of amateurs and private funders in the early growth of the field is highlighted, as is the participation of women and of students and scholars of diverse ethnicities.

**Prehistoric Europe** - Timothy Champion - 2016-06-16
The study of European prehistory has been revolutionized in recent years by the rapid growth rate of archeological discovery, advances in dating methods and the application of scientific techniques to archaeological material and new archaeological aims and frameworks of interpretation. Whereas previous work concentrated on the recovery and description of material remains, the main focus is now on the reconstruction of prehistoric societies and the explanation of their development. This volume provides that elementary and comprehensive synthesis of the new discoveries and the
Whereas previous work on European prehistory has been revolutionized in recent years by the rapid growth rate of archeological discovery, advances in dating methods and the application of scientific techniques to archaeological material and new archaeological aims and frameworks of interpretation. Concentrated on the recovery and description of material remains, the main focus is now on the reconstruction of prehistoric societies and the explanation of their development. This volume provides that elementary and comprehensive synthesis of the new discoveries and the new interpretations of European prehistory. After an introductory chapter on the geographical setting and the development of prehistoric studies in Europe, the text is divided chronologically into nine chapters. Each one describes, with numerous maps, plans and drawings, the relevant archaeological data, and proceeds to a discussion of the societies they represent. Particular attention is paid to the major themes of recent prehistoric research, especially subsistence economy, trade, settlement, technology and social organization.

**Prehistoric Europe** - Timothy Champion - 2016-06-16

The study of European prehistory has been revolutionized in recent years by the rapid growth rate of archeological discovery, advances in dating methods and the application of scientific techniques to archaeological material and new archaeological aims and frameworks of interpretation.

**Excavations in the Late Neolithic Fortress of Homolka in Bohemia** -
The enclosures are discussed in the context of a study of the local area, which shows that at this date the population had been spread across a number of small settlements and had built more than 100 megalithic graves (dolmens and passage graves). A comparative survey considers about 800 similar enclosures that have been found in Europe in the last 115 years. Niels H. Andersen concludes by interpreting the neolithic enclosures as sites at which a dispersed population temporarily, in an act of rites of passage, buried its dead, later to exhume them and re-inter parts of the bodies in megalithic graves closer to their settlements. Further publications will include a presentation of the finds and features from the Sarup site, and a volume on the survey work with excavations of megalithic sites and settlements.

Sarup - Niels H. Andersen - 1997
This work presents two large enclosures from the neolithic - - 3400 and 3200 BC -- at Sarup on the island of Fyn in Denmark, surrounded by palisade fences and a series of large oblong ditches. The Sarup excavation is the largest of its kind in Europe.
Denmark, surrounded by palisade fences and a series of large oblong ditches. The Sarup excavation is the largest of its kind in Europe. The enclosures are discussed in the context of a study of the local area, which shows that at this date the population had been spread across a number of small settlements and had built more than 100 megalithic graves (dolmens and passage graves). **Ranking, Resource and Exchange** - John Disney
Professor of Archaeology
Cyprian Broodbank - 1982-09-02

Ranked societies are characterized by disparities in personal status that are often accompanied by the concentration of power and authority in the hands of a few dominant individuals. They stand between the sophistication of developed, states and the relative simplicity of most hunter-gatherer groups and early agriculturalists. In some places and times they represented relatively brief phases of transition to more complex forms of organization; in others they existed as stable forms of adaptation for thousands of years. They are thus of great interest for archaeologists seeking to understand the dynamics of cultural evolution.

**The Origins of Civilization** - Roger Stuart Moorey - 1979
This collection of essays by leading scholars of archaeology and prehistory examines the emergence of permanent human settlements and the social, political, and religious ideas that may have accompanied this development. Two introductory lectures sketch the emergence of man and his development as hunter, farmer, and fisherman. Then, taking civilization in its most precise sense, separate essays review the evolution of urban societies in the Near East, Europe, China, and Mesoamerica. Final lectures address the role of religion in early human societies, and the development of writing in the Old World. This distinguished and highly accessible collection will appeal to both the specialist and the interested general reader.
