• It was designed to overcome the prime disadvantages in all edgewise systems: increased friction in later stages design. The tip edge bracket 1. Basically it is a modified straight wire bracket 2. Notch in bracket which allows crown of tooth to tip up to 25 degrees. 3. Tip edge plus bracket system.

Orthodontic Technology - Wikipedia
Orthodontic technology is a specialty of dental technology that is concerned with the design and fabrication of dental appliances for the treatment of malocclusions, which may be a result of tooth irregularity, disproportionate jaw relationships, or both. There are two main types of orthodontic appliances: active, passive and functional. All these types can be fixed or removable.

MAUDE - Manufacturer and User Facility Device Experience
1. Manufacturers and importers must submit reports when they become aware of information that reasonably suggests that one of their marketed devices may have caused or contributed to a death or serious injury or has malfunctioned and the malfunction of the device or a similar device that they market would be likely to cause or contribute to a death or serious injury if the malfunction were to recur.
