**Age Structuring in Comparative Perspective**

This volume studies age as a basis for social organization by uniting research from the social science disciplines while implementing both cross-cultural and historical perspectives. The contributors, a distinguished interdisciplinary group of scholars, advance our understanding of age structuring by relating the changing societal level processes and individual aging experiences, and examining retirement practices, age and power in society, and cultural conceptions of age.

**Changing Structures of Inequality**

Yannick Lemel - 2002-05-02

Changing Structures of Inequality examines these questions in a new comparative perspective, covering five national societies - Canada, France, Germany, Spain, and the United States. The authors offer a deed analysis of country-specific research traditions in the fields of class analysis and social stratification, revealing important conceptual differences which have consequences for the diagnoses. They present the results of substantial comparative studies on different aspects of inequality in developed societies - the inequality of income and wealth, educational inequalities; status crystallization; migration and inequality; gender inequality and the structuring effect of social class - highlighting similarities as well as substantial differences between the societies under examination. The authors offer a nuanced conclusion that puts in perspective the different topics of this contemporary debate. Developed societies are now characterized by more dynamic and pluralistic structures of inequalities, where classes have lost some of their previous importance, but to some extent still have a place. Contributors include Howard M. Bahr, Mathias Bös, Gary Caldwell, Salustiano del Campo, Theodore Caplow, Louis Chauvel, Michel Forse, Wolfgang Glatzer, Richard Hauser, Paul W. Kingston, Denise Lemiéux, Laura Maratou-Alipranti, and Marion Mohle.

**Old-Age Security in Comparative Perspective**

John B. Williamson - 1993-03-11

This work makes extensive use of seven well-developed historical case studies describing the evolution of public old-age security in industrial nations (Germany, United Kingdom, Sweden, and the United States) and developing nations (Brazil, Nigeria, and India). The authors focus on specifying contexts in which general theoretical perspectives can be used to account for these developments. One of the few studies which integrates historical and quantitative data, this accessible work will prove helpful to students and researchers of the welfare state, aging policy, and comparative sociology.

**Democratic Justice**

Ian Shapiro - 1999-01-01

Democracy and justice are often mutually antagonistic ideas, but in this innovative book Ian Shapiro shows how and why they should be pursued together. Justice must be sought democratically if it is to garner legitimacy in the modern world, he claims, and democracy must be justice-promoting if it is to sustain allegiance over time. Democratic Justice meets these criteria, offering an attractive vision of a practical path to a better future. Wherever power is exercised in human affairs, Shapiro argues, the lack of democracy will be experienced as injustice. The challenge is to democratize social relations so as to diminish injustice, but to do this in ways that are compatible with people's values and goals. Shapiro shows how this can be done in different phases of the human life cycle, from childhood through to adulthood, and to the elderly. are compatible with people's values and goals. Shapiro shows how this can be done in different phases of the human life cycle, from childhood through the adult worlds of work and domestic life, retirement, old age, and approaching death. He spells out the implications for pressing debates about authority over children, the law of marriage and divorce, population control, governing the firm, basic income guarantees, health insurance, retirement policies, and decisions made by and for the infirm elderly. This refreshing encounter between political philosophy and practical politics will interest all those who aspire to bequeath a more just world to our children than the one we have inherited.

Handbook of Theories of Aging, Second Edition - Merrill Silverstein PhD - 2008-10-27
The field of gerontology has often been criticized for being "data-rich but theory-poor." The editors of this book address this issue by stressing the importance of theory in gerontology. While the previous edition focused on multidisciplinary approaches to aging theory, this new edition provides cross-disciplinary, integrative explanations of aging theory. The contributors of this text have reached beyond traditional disciplinary boundaries to partner with researchers in adjacent fields in studying aging and age-related phenomena. This edition of the Handbook consists of 39 chapters written by 67 internationally recognized experts in the field of aging. It is organized in seven sections, reflecting the major theoretical developments in gerontology over the past 10 years. Special Features: Comprehensive coverage of aging theory, focusing on the biological, psychological, and social aspects of aging A section dedicated to discussing how aging theory informs public policy A concluding chapter summarizing the major themes of aging, and offering predictions about the future of theory development Required reading for graduate students and post doctoral fellows, this textbook represents the current status of theoretical development in the study of aging.

Race, Socioeconomic Status, and Family Structure - Kathleen A. Cagney - 1998
During the past few decades, the dramatic social changes with regard to our aging population and changes in the family unit have made both demographic and socioeconomic consequences, as well as an effect on matters of social policy. The prestigious editors, George L. Maddox and M. Powell Lawton, have assembled an impressive group of expert contributors whose chapters address topics from the latest theory and research findings to the changing balance of work and families, as well as patterns of kinship.

Aging and Old Age - Richard A. Posner - 1995
Observing that people change both physically and cognitively as they age, Posner suggests that each of us has, in succession, two separate selves - younger and older - with different abilities, interests, and behaviors, an insight that helps clarify a number of issues concerning the elderly.

Aging, Social Inequality, and Public Policy - Fred C. Pampel - 1998-02-25
Fred C. Pampel describes how age combines with other components of inequality by comparing the influence of group membership on social inequality before and after the life course transition to old age. He looks at the differences in public policy and how age inequality -- more than the other sources of inequality -- relates closely to government policies and studies other societies in which both age group differences and overall inequality differ from those in the United States. Pampel makes a comparison of the United States with other nations a central component of the book, providing greater understanding of the larger forces that shape old age.

Old-age Security in Comparative Perspective - John B. Williamson - 1993
This book examines a central element of social welfare, old age security, exploring the history of policies in both developed and underdeveloped countries to assess their structure, ideology and effectiveness. The authors test five theoretical perspectives on old-age security policy in four industrial nations (the United States, the United Kingdom, Sweden, Germany) and three developing countries (India, Nigeria, Brazil), challenging the view that old age policy is the outcome of class conflict between capital and labor. Instead, the authors adopt a neo-pluralist perspective which emphasizes the influence of ethnic religious and regional groups, as well as "the grey lobby", over that of class-based groups. The authors attempt to test ideas derived in part from these historical case studies by analysing quantitative data from a broader sample of countries (18 industrial nations and 32 developing nations), and they use these results to anticipate future policy developments in the U.S.

Robert Butler's call for life reviews has exerted a key influence on the way gerontologists have looked at reminiscence and remembering. Widely thought to be a helpful mechanism for integrating past and future, the process of life review needs better specification and evaluation based on sound research. "The Meaning of Reminiscence and Life Review" brings together both research and application pieces covering the range of possibilities. It examines important controversies and asks: "Does it work?" and "What is the evidence?" Given their own voice, what do old people say about looking back?

Old Age from Antiquity to Post-Modernity - Paul Johnson - 2002-11-01

Based on themes such as status and welfare, Old Age from Antiquity to Post-Modernity examines the role of the elderly in history. This empirical study represents a substantial contribution to both the historical understanding of old age in past societies as well as the discussion of the contribution of post-modernism to historical scholarship.

Father-Child Relations - Barry S. Hewlett - 2017-09-04

Due to a greater involvement of American fathers in the direct care of their children in recent years, interest in the impact and nature of the father's role in nurturing children has increased. While studies about fathers in the industrialized, literate West have proliferated, little is known about the role of fathers in the preliterate, non-Western world. This collection examines the diversity of paternal roles found in human cultures among various types of societies that are very peaceful and those that actively engage in warfare as a mode of existence. Father-Child Relations recognizes the importance of understanding both biological and cultural aspects of the father's role. Many of the contributors utilize evolutionary or biosocial models, including those of developmental psychology, to examine the father's role, while others rely upon the symbolic analysis of cultural and social anthropology. One chapter is devoted to male-infant relationships in nonhuman primates, a further largely ignored comparative perspective. The anthropologists who have contributed to this collection are field workers who have lived intimately over significant periods of time with the people about whom they are writing. These research efforts from the field have been edited to make them wholly accessible to the non-specialist. The contributors of this volume recognize that biology and ideology are intertwined; both together influence the father's behavior and the effects of his behavior.

Handbook of the Psychology of Aging - K Warner Schaie - 2010-12-21

The Handbook of the Psychology of Aging, Seventh Edition, provides a basic reference source on the behavioral processes of aging for researchers, graduate students, and professionals. It also provides perspectives on the behavioral science of aging for researchers and professionals from other disciplines. The book is organized into four parts. Part 1 reviews key methodological and analytical issues in aging research. It examines some of the major historical influences that might provide explanatory mechanisms for a better understanding of cohort and period differences in psychological aging processes. Part 2 includes chapters that discuss the basics and nuances of executive function; the history of the morphometric research on normal brain aging; and the neural changes that occur in the brain with aging. Part 3 deals with the social and health aspects of aging. It covers the beliefs that individuals have about how much they control outcomes in their life; the impact of stress on health and aging; and the interrelationships between health disparities, social class, and aging. Part 4 discusses the emotional aspects of aging; family caregiving; and mental disorders and legal capacities in older adults. Contains all the main areas of psychological gerontological research in one volume Entire section on neuroscience and aging Begins with a section on theory and methods Edited by one of the father of gerontology (Schaie) and contributors represent top scholars in gerontology.
African families are responding to serious crises in resilient ways. This volume provides socially and historically useful insights into not only the differences between cultures but also between the perspectives of the contributors represent top scholars in gerontology.

This book comprises a collection of refereed and edited papers that originated from a conference on East-West values in elderly care held in Hong Kong in 1996. Organized under Western or Eastern perspectives, the contributions reflect the belief that knowledge in the care-giving field has reached a point where comparisons can shed useful insights into not only the differences between cultures but also between the perspectives of the scholars.

African families are responding to serious crises in resilient ways. This volume provides socially and historically based, culturally rich, multigenerational, interdisciplinary and comparative perspectives on family life in Africa today.

Event History Analysis With Stata - Hans-Peter Blossfeld - 2012-10-12

Event History Analysis With Stata provides an introduction to event history modeling techniques using Stata (version 9), a widely used statistical program that provides tools for data analysis. The book emphasizes the usefulness of event history models for causal analysis in the social sciences and the application of continuous-time models. The authors illustrate the entire research path required in the application of event-history analysis, from the initial problems of recording event-oriented data, to data organization, to applications using the software, to the interpretation of results. The book also demonstrates, through example, how to implement hypotheses tests and how to choose the right model. The strengths and limitations of various techniques are emphasized in each example, along with an introduction to the model, details on how to input data, and related Stata commands. Each application is accompanied by a brief explanation of the underlying statistical concept. Readers are offered the unique opportunity to easily run and modify all of the book's application examples on a computer, by visiting the author's Web site at http://www.uni-hamburg.de/sowi/soziologie-i/eha/. Examples include survival rates of patients in medical studies; unemployment periods in economic studies; and the time it takes a criminal to break the law after his release in a criminological study. This new book supplements Event History Analysis, by Blossfeld et al, and Techniques of Event History Modeling, by Blossfeld and Rohwer, extending on their coverage of practical applications and statistical theory. Intended for researchers in a variety of fields such as statistics, economics, psychology, sociology, and political science, Event History Analysis With Stata also serves as a text, in combination with the authors' other two books, for courses on event history analysis.

Techniques of Event History Modeling - Hans-Peter Blossfeld - 2001-09

Including new developments and publications which have appeared since the publication of the first edition in 1995, this second edition: *gives a comprehensive introductory account of event history modeling techniques and their use in applied research in economics and the social sciences; *demonstrates that event history modeling is a major step forward in causal analysis. To do so the authors show that event history models employ the time-path of changes in states and relate changes in causal variables in the past to changes in discrete outcomes in the future; and *introduces the reader to the computer program Transition Data Analysis (TDA). This software estimates the sort of models most frequently used with longitudinal data, in particular, discrete-time and continuous-time event history data. Techniques of Event History Modeling can serve as a student textbook in the fields of statistics, economics, the social sciences, psychology, and the political sciences. It can also be used as a reference for scientists in all fields of research.

Aging in the Past - David I. Kertzer - 2018-05-04

Thanks to improved food, medicine, and living conditions, the average age of the population is increasing throughout the modern industrialized world. Yet, despite the recent upsurge of scholarly interest in the lives of older people and the blossoming of historical demography, little historical demographic attention has been paid to the lives of the elderly. A landmark volume, Aging in the Past marks the emergence of the historical demographic study of aging. Following a masterly explication of the new field by Peter Laslett, leading scholars in family history and historical demography offer new research results and fresh analyses that greatly increase our understanding of aging, historically and across cultures. Focusing primarily on post-Industrial Europe and the United States, they explore a range of issues under the broad topics of living arrangements, widowhood, and retirement and mortality. This important work provides a much-needed historical perspective on and suggests possible alternative solutions to the problems of the aged. Contributors: George Alter, Rudolf Andorka, Allen C. Goodman, Myron P. Gutmann, Michael R. Haines, E. A. Hammel, Tamara K. Hareven, Nancy Karweit, David I. Kertzer, Peter Laslett, Andrejs Plakans, Roger L. Drawing on a backlist dating to 1893, Voices Revived makes high-quality, peer-reviewed scholarship accessible once again using print-on-demand technology. From the laughing clubs of India and robotic granmmy-minders of Japan to the “Flexsecurity” system of Denmark and the elderscapes of Florida, experts in this collection bring readers cutting-edge and future-focused approaches to our aging population worldwide. In this fourth edition of an award-winning text on the consequences of global aging, a team of expert anthropologists and other social scientists presents the issues and possible solutions as our population age over 60 rises to double that of the year 2000. Chapters describe how the consequences of global aging will influence life in the 21st century in relation to biological limits on the human life span, cultural construction of the life cycle, generational exchange and kinship, makeup of households and community, and attitudes toward disability and death. This completely revised edition includes 20 new chapters covering China, Japan, Denmark, India, West and East Africa, Indonesia, Mexico, Peru, indigenous Amazonia, rural Italy, and the ethnic landscape of the United States. A popular feature is an integrated set of web book chapters listed in the contents, discussed in chapter introductions, and available on the book’s website. Takes a qualitative, case study approach, with most chapters informed by original, ongoing field research around the world. Includes a fully updated bibliography, glossary, and impact. Current debates in life course studies increasingly reference theories of individualization, standardization, and differentiation in the structure of the life course. This volume brings together leading scholars from a variety of fields to assess the theoretical underpinnings, the empirical evidence, and the implications of existing arguments. The contributions include comparative-historical work, demographic analysis, and detailed survey research. The topics covered include historical, cross-cultural, and rachiothemic variation in the transition to adulthood, the school-to-work transition, educational careers, retirement, activity characteristics over the life span and the life course context of psychological well-being. The various contributions expand our understanding of the contemporary life course and its implications. The authors offer innovative theoretical and methodological approaches that demonstrate the utility of holistic approaches to conceptualizing the life course and understanding its implications for modern society.

industrialization. The essays in this volume challenge this myth and provide dramatic revisions of simplistic
notions about change in the American family. Based on detailed research in a variety of sources, including
extensive oral history interviews of ordinary people, these essays examine major changes in family life, dispel
myths about the past, and offer new directions in research and interpretation. The essays cover a wide spectrum of
issues and topics, ranging from the organization of the family and household, to the networks available to
children as they grow up, to the role of the family in the process of industrialization, to the division of labor in the
family along gender lines, and to the relations between the generations in the later years of life. While discussing
family relations in the past and revising prevailing notions of social change, these interdisciplinary essays also
provide important perspectives on the present.

Repositioning Class - Professor Gordon Marshall - 1997-07-11

In recent years the death of social class has been regularly reported - such pronouncements have been as
exaggerated as they were untimely. Social class is as important to the understanding of late twentieth-century
industrial societies as it was to their early twentieth-century counterparts. This book aims to explain why class has
persisted as such a potent social force. In Repositioning Class Gordon Marshall uses the comparative study of
British experiences in relation to those of the United States, Scandinavia and the former communist countries of
Eastern Europe. Also examined are cases where Britain provides the exclusive focus for discussion either about
class itself, or about how sociologists might most usefully pursue class analysis in the future. Specific issues
include: the question of meritocracy, the relationship between class and gender, arguments about
proletarianization, collective identities and the nature of the so-called underclass in advanced societies.

Repositioning Class - Professor Gordon Marshall - 1997-07-11

In recent years the death of social class has been regularly reported - such pronouncements have been as
exaggerated as they were untimely. Social class is as important to the understanding of late twentieth-century
industrial societies as it was to their early twentieth-century counterparts. This book aims to explain why class has
persisted as such a potent social force. In Repositioning Class Gordon Marshall uses the comparative study of
British experiences in relation to those of the United States, Scandinavia and the former communist countries of
Eastern Europe. Also examined are cases where Britain provides the exclusive focus for discussion either about
class itself, or about how sociologists might most usefully pursue class analysis in the future. Specific issues
include: the question of meritocracy, the relationship between class and gender, arguments about
proletarianization, collective identities and the nature of the so-called underclass in advanced societies.

Ageism and Mistreatment of Older Workers - Patricia Brownell - 2012-12-11

This book promotes an understanding of ageism, discrimination and mistreatment of older adult workers,
incorporating an international human rights perspective. The impact of ageism on the mistreatment of older adult
workers has not to date been examined in depth through the lens of international human rights instruments, nor
has discrimination against older adults in the workplace been framed as a form of elder abuse for research and
policy making purposes. This book presents a multi-disciplinary exploration of these themes as they affect work
and retirement of older adults. It reflects the view that older people who choose to work into old age should be
able to do so in enabling work environments that promote dignity and are free of abuse. The contributing authors
are members of the International Network for the Prevention of Elder Abuse (INPEA), a non-governmental
organization with consultative status at the United Nations, and have devoted their professional careers to
increase awareness and understanding of elder abuse in order to prevent it. The editors hope that broadening the
framework within which elder abuse in the workplace is understood will stimulate further research, policy and
program development to address this troubling social problem.

Europe's new state of welfare - Goul Andersen, Jørgen - 2002-11-27

It is often argued that European welfare states, with regulated labour markets, relatively generous social
protection and relatively high wage equality, have become counter-productive in a globalised and knowledge-
intensive economy. Using in-depth, comparative and interdisciplinary analysis of employment, welfare and
citizenship in a number of European countries, this book challenges this view. It provides: an overview of
employment and unemployment in Europe at the beginning of the 21st century; a comprehensive critique of the
idea of globalisation as a challenge to European welfare states; detailed country chapters with new and previously
inaccessible information about employment and unemployment policies written by national experts. Europe's new
state of welfare is essential reading for students and teachers of social policy, welfare studies, politics and
economics.

Handbook of the Life Course - Jeylan T. Mortimer - 2007-12-14

This comprehensive handbook provides an overview of key theoretical perspectives, concepts, and methodological
approaches that, while applied to diverse phenomena, are united in their general approach to the study of lives
across age phases. In surveying the wide terrain of life course studies with dual emphases on theory and empirical
research, this important reference work presents probative concepts and methods and identifies promising
avenues for future research.
