**Fertility, Conjuncture, Difference** - Astrid Bochow - 2017-08-31
In the last forty years anthropologists have made major contributions to understanding the heterogeneity of reproductive trends and processes underlying them. Fertility transition, rather than the story of the triumphant spread of Western birth control rationality, family forms, and modern technology to the whole world, reveals a diversity of reproductive means and ends continuing before, during, and after transition. This collection brings together anthropological case studies approach (as an alternative to mainstream demographic models of 'fertility decision-making') and places them in a comparative framework to address how fertility is simply one element of a complex anthropological or compositional demography in which the formation and size of families is not decided solely or primarily by reproduction.

Biocultural or biosocial anthropology is a research approach that views biology and culture as dialectically and inextricably intertwined, explicitly emphasizing the dynamic interaction between humans and their larger social, cultural, and physical environments. The biocultural approach emerged in anthropology in the 1960s, matured in the 1980s, and is now one of the dominant paradigms in anthropology, particularly within biological anthropology. This volume gathers contributions from the top scholars in biocultural anthropology focusing on six of the most influential, productive, and important
follow a consistent format of a biocultural anthropology. These are: critical and synthetic approaches within biocultural anthropology; biocultural approaches to identity, including race and racism; health, diet, and nutrition; infectious disease from antiquity to the modern era; epidemiologic transitions and population dynamics; and inequality and violence studies. Focusing on these six major areas of burgeoning research within biocultural anthropology makes the proposed volume timely, widely applicable and useful to scholars engaging in biocultural research and students interested in the biocultural approach, and synthetic in its coverage of contemporary scholarship in biocultural anthropology. Students will be able to grasp the history of the biocultural approach, and how that history continues to impact scholarship, as well as the scope of current research within the approach, and the foci of biocultural research into the future. Importantly, contributions in the text discussion of method and theory relative to a particular aspect of the above six topics, followed by a case study applying the surveyed method and theory. This structure will engage students by providing real world examples of anthropological issues, and demonstrating how biocultural method and theory can be used to elucidate and resolve them. Key features include: Contributions which span the breadth of approaches and topics within biological anthropology from the insights granted through work with ancient human remains to those granted through collaborative research with contemporary peoples. Comprehensive treatment of diverse topics within biocultural anthropology, from human variation and adaptability to recent disease pandemics, the embodied effects of race and racism, industrialization and the rise of allergy and autoimmune diseases, and the sociopolitics of slavery and torture. Contributions and sections united by

Provision of synthetic theory, method and data in each contribution. The use of richly contextualized case studies driven by empirical data. Through case-study driven contributions, each chapter demonstrates how biocultural approaches can be used to better understand and resolve real-world problems and anthropological issues.

Accessibly demonstrating how to integrate scientific methodologies into Egyptology broadly, and in Egyptian archaeology in particular, this volume will help to maximise the amount of information that can be obtained within a study of ancient Egypt, be it in the field, museum, or laboratory. Using a range of case studies which exemplify best practice within Egyptian archaeological science, Science in the Study of Ancient Egypt presents both the scientific methods of analysis available and their potential applications to Egyptologists. Although Egyptology has mainly shown a marked lack of engagement with recent archaeological science, the authors illustrate the inclusive but varied nature of the scientific archaeology which is now demonstrating how new analytical techniques can develop greater understanding of Egyptian data.

**Elements of Demography** - V.C. Sinha - 1984-04-12
During the last 30 years or more ‘Demography’ has had to go through various degrees of change under the impact of new theories and ideas. Prof. Sinha and Prof. Zacharia have made a sincere and successful endeavour to present systematically and lucidly all these new trends in recent thinking in studies of Demography. The book is written in a compact, coherent and comprehensive manner and enables the students to have a thorough knowledge of the elements of demography and population problems of India and abroad. The book is intended to serve as a textbook for M.A. and M.Com. courses of all Indian universities.

Special Features: Integrates coverage of contemporary issues such as health systems, migration, and development throughout the text to highlight the practical applications and relevance of cultural anthropological studies. More focus on theory in cultural anthropology with a new section on the history of theory (Ch. 1) and more explicit links to theory in the Critical Thinking boxes in every chapter. This volume takes stock of the current status of the comparatively new discipline of "Anthropological Demography", and discusses its major methods, its main strengths, and its chief limitations. It includes contributions from both mainstream demographers and foremost anthropologists, all stressing the necessity of a discipline to progress successfully and avoid marginalization. While the unique research and personal satisfaction afforded by "participant observation" is described, the book also highlights the potential contribution to the understanding of demographic events of much more than the field methods of traditional anthropology. In particular, it stresses the insights possible from qualitative focus group interviews, from longitudinal studies and from a greater interest in "armchair" anthropology, in which demographers complement their quantitative findings with qualitative information and understanding gleaned from a careful reading of the anthropological literature, in the form of both ethnographies and anthropological theories. In addition, it stresses the larger world of the ideal anthropological demographer: a world that includes the cultural context of course, but also takes into account the
common intense interest in that condition so much individual behaviour. But the book is also a critical venture. It includes therefore considerable discussion of the common limits of the purely anthropological approach for understanding demographic events and processes, especially from a larger policy perspective, at the same time as it emphasizes the crucial role of the anthropological approach to designing policy that is potentially effective as well as socially and culturally sensitive. It reiterates the often complementary role of anthropological demography and also discusses some specific questions in demographic research which it does not as yet seem to have the capacity to illuminate. The book is aimed primarily at demographers wishing to broaden their research agenda and deepen their understanding of demographic behaviour, but it also hopes to convert mainstream anthropologists to take a more active interest in demographic issues. It offers a clear agenda based on important conceptual and methodological advances, and often working in close collaboration with medical and historical research. Approaches to population that are grounded in sustained ethnographic and historical research provide more than substantive knowledge of how cultural and social formations interact with health. They enable understanding of how local institutions and experience of vital events come to be translated into the demographic and health measures on which survey and clinical programmes rely. The anthropological demography of health, as a field of interdisciplinary population research, has grown from the 1990s, extending to a remarkable range of key human and policy issues, including: genetic disorders; nutrition; mental health; infant, child, and maternal morbidity; malaria; HIV/AIDS; disability and chronic diseases; new reproductive technologies; and population ageing. By observing group formation and change over time, tracking people’s networks, and observing variance between what people say and do, anthropological demography goes beyond the characteristically top-down formal methodologies of most mainstream socio-economic demography and population health. Life and Death in the Ancient City of Teotihuacan - Rebecca Storey - 1992-01-30
Cities arose independently in both the Old World and in the pre-Columbian New World. Lacking written records, many of these New World cities can be studied only through archaeology, including the earliest pre-Columbian city, Teotihuacan, Mexico, one of the largest cities of its time (150 B.C. to A.D. 750). Thus, an important question is how similar New World cities are to their Old World counterparts. Storey's research shows clearly that although Teotihuacan was a very different environment and culture from 17th-century London, these two great cities are comparable in terms of health problems and similar death rates.

Organized into three major sections, An Introduction to Molecular Anthropology first covers the basics of genetics – what genes are, what they do, and how they do it – as well as how genes behave in populations and how evolution influences them. The following section provides an overview of the different kinds of genetic variation in humans, and how this variation is analyzed and used to make evolutionary inferences. The third section concludes with a presentation of the current state of genetic evidence for human origins, the spread of humans around the world, the role of selection and adaptation in human evolution, and the impact of culture on human genetic variation. Molecular anthropology uses molecular genetic methods to address questions and issues of anthropological interest. First published in 1979, this is a classic study of the population of the Bushmen of the Kalahari Desert of Botswana. Using methods that are simple and fully illustrated, the author presents empirical descriptions of the fertility, mortality, and marriage patterns of the now famous !Kung hunter-gatherers. The !Kung "Bushman" people of the Kalahari desert in Africa occupy an anomalous position in the world of science. They have been selected for intensive study precisely because they are geographically, socially, and economically removed from modern, industrialized society, living in a sparsely settled and remote portion of an enormous semidesert. The !Kung maintain the language and culture of a fully developed hunting and gathering society with (until very recently) no dependence on cultivated plants, no domesticated animals other than the dog, no stratification system based power or authority structure extending further than the local bands composed of a few related families, no wage labor, no use of money, and no settled sites of occupation. At the same time, the !Kung have become well-known figures to students—both undergraduate and professional—of Western social science. The faces of !Kung informants gaze from the covers and the illustrations of many texts in anthropology and sociology. Why has all this attention been developed around the !Kung people? Part of the answer lies in the people themselves. The !Kung are a physically attractive people, with slender, graceful bodies and open small-featured faces that are appealing and photogenic. Their culture is simple and has its striking features. The struggle for subsistence, the click language, the emphasis on sharing and humility, the drama of the curing dances in which individuals go into trance and speak directly to spirits to cure sickness, and

**Population Studies and Development from Theory to Fieldwork** - Véronique Petit - 2017-10-30
This book addresses major population and development issues: fertility and reproductive health, migrations, gender, education, poverty and inequalities. To that aim it revisits and considerably enlarges Kingsley Davis’ 1963 theory of change and response, using interdisciplinary methodologies. On the basis of four decades of field research (1985-2015), it questions the rationality of the actors, how culture shapes socio-demographic behaviours, in a context of modernity and globalisation. More specifically, it casts new light on the interactions of individuals, families, networks and local communities with the State and its population policy.
an integrated and dynamic system of adaptation; biocultural connections that highlight the integration of human culture and biology in the steps humans take to meet the challenges of survival; and the emergence of globalization and its disparate impact on peoples and cultures around the world. Pedagogical elements support these main themes and give deeper insight into the meaning and relevance of a wide range of topics covered in the general narrative by tying examples to behavior today. Insightful questions foster critical thinking, additional Visual Counterpoints widen the book's array of compare-and-contrast examples, and a new Digging into Anthropology feature provides a hands-on approach to anthropological methods by giving active learning opportunities related to each chapter's content. The Essence of Anthropology - William A. Haviland - 2015-02-04
THE ESSENCE OF ANTHROPOLOGY features an experienced and diverse author team with expertise in all subfields of anthropology. With an eye to visual and written clarity, the authors present anthropology from an integrated, holistic perspective. They use three unifying themes as a framework to tie the book together and keep students focused: systemic adaptation to emphasize that every culture, past and present, is an integrated and dynamic system of adaptation; biocultural connections that highlight the integration of human culture and biology in the steps humans take to meet the challenges of survival; and the emergence of globalization and its disparate impact on peoples and cultures around the world. CULTURAL
ANTHROPOLOGY: A
CONTEMPORARY
PERSPECTIVE, Third Edition
is a sophisticated synthesis of
social and cultural
anthropology. Keesing was
concerned with the political
and ethical implications of
anthropological fieldwork and
was sensitive to the global
conditions of inequality
caused by the spread of
capitalist relations of
production. Thus, his book is
more "political" than other
introductory texts in the field.
Keesing was also committed
to the belief that students
should not merely memorize
terms and theories, but
should also be challenged to
ponder the deep questions
raised by human diversity.
Roger Keesing’s untimely
death in 1992 necessitated
that a co-author execute his
planned revision. Dr. Andrew
Strathern was chosen
because, like Keesing, his
anthropological fieldwork and anthropological tradition, his fieldwork has concentrated on the Pacific, and his recent teaching experience has acquainted him with American cultural anthropology. In this revision, Dr. Strathern preserved Keesing's vision, arguments, and the ethnographies presented as illustrations of Keesing's theories, while also examining each sentence to determine whether its assertions needed to be updated, modified, or abandoned. Small changes made in this way incorporated a larger aim of updating and recasting the book to better fit and reflect a world 20 years since publication of the first edition.

**Challenges of Latino Aging in the Americas** - William A. Vega - 2015-03-18

This book examines one of the most important demographic changes facing the United States: an overall aging population and the increasing influence of Latinos. It also looks at the changing demographics in Mexico and its impact on the health and financial well-being of aging Mexicans and Mexican Americans. The book provides a conceptual and accessible framework that will educate and inform readers about the interconnectedness of the demographic trends facing these two countries. It also explores the ultimate personal, social, and political impact they will have on all Americans, in the U.S. as well as Mexico. Challenges of Latino Aging in the Americas features papers presented at the 2013 International Conference on Aging in the Americas, held at the University of Texas at Austin, September 2013. It brings together the work of many leading scholars from the fields of sociology, demography, psychology, anthropology, geography, social work, geriatric medicine, epidemiology, and public affairs. Coverage in this edited collection includes working with diverse populations; culturally compatible interventions for diverse elderly; the health, mental health, and social needs and concerns of aging Latinos; and the policy, political, and bi-lateral implications of aging and diversity in the U.S. and Mexico. The book provides a rich blend of empirical evidence with insightful, cutting-edge analysis that will serve as an insightful resource for researchers and policy makers, professors and graduate students in a wide range of fields, from sociology and demography to economics.

Dental Anthropology - Kurt W. Alt - 2012-12-06
Shelley Saunders This book offers a welcome diversity of topics covering the broader subjects of teeth and the study of teeth by anthropologists. There is an impressive array of coverage here including the history of anthropological study of the teeth, morphology and structure, pathology and epidemiology, the relationship between nutrition, human behavior and the dentition, age and sex estimation from teeth, and geographic and
forensic anthropologists. Chapter authors have provided thorough reviews of their subjects along with examples of recent analytical work and recommendations for future research. North American researchers should particularly appreciate the access to an extensive European literature cited in the individual chapter bibliographies. Physical anthropologists with even a passing interest in dental research should greet the publication of this book with pleasure since it adds to a growing list of books on how the study of teeth can tell us so much about past human populations. In addition to the archaeological applications, there is the forensic objective of dental anthropology which the editors refer to in their introduction which is dealt with in this volume. The chapters dealing with methods of sex determination, age estimation of juveniles and age estimation of adults using the teeth are exhaustive and exacting and of critical importance to both "ostearchaeologists" and

Authors Liversidge, Herdeg and Rosing provide very clear guidelines for the use of dental formation standards in juvenile age estimation, recommendations that are so obviously necessary at this time.

**Uncertain Honor** - Jennifer Johnson-Hanks - 2006-01-02
Offering an intimate look at the lives of African women trying to reconcile motherhood with new professional roles, the author argues that Beti women delay motherhood as part of a broader attempt to assert a modern form of honor only recently made possible by formal education, Catholicism, and economic change.

Symposia of the Society for the Study of Human Biology, Volume V: Dental Anthropology is a collection of papers that covers the application of dental pathology in the context of anthropology. The book presents 15 studies that cover various human dental variables and relates to different anthropological factors. The dental variables considered in the articles include tooth morphology; occlusion and malocclusion of primate teeth; morphogenesis of deciduous molar pattern in man; and double-rooted human lower canine teeth. The text also covers topics about race specific dental traits such as radiographic study of the Neanderthal teeth from Krapina; crown characters of the deciduous dentition of the Japanese-American hybrids; and analysis of the American Indian dentition. The selection will be of great interest to evolutionary scientists, such as anthropologists and paleontologists.

Military and civilian organizations in the past have attempted to understand culture and the cultural environment of conflict zones through anthropology. While there is a small and growing number of studies examining the use of anthropology for counterinsurgency, no studies have compared the Anglo-Saxon ABCA Armies' approaches to understanding cultural factors for counterinsurgency and civil-military operations. Crisis of Cultural Intelligence: The Anthropology of Civil-military Operations thus represents a timely investigation into a number of issues regarding the past and present relationship between militarized anthropology, settler colonialism, and Indigenous militancy and the Declaration of the Rights of Indigenous Peoples, which has internationalized the claim of encapsulated nations for equal rights. Covering militarized anthropology in the Vietnam War and the controversial Human Terrain System (HTS) program used in Afghanistan, this book addresses the need for constructive and informed discussions about the nature and function of cultural data collection and analysis for counterinsurgency, peacebuilding, and conflict prevention operations. Crisis of Cultural Intelligence: The Anthropology of Civil-military Operations is particularly important today, as cultural values and heritage continue to inform civil-military interventions of intrastate armed conflict amongst the people. Following the wars in Iraq and Afghanistan, this book will provide some insights into how militaries will now need to look ahead and consider the types of conflicts they may become involved in.

Elements of Human and Social Geography: Some Anthropological Perspectives examines elements of human and social geography from an anthropological perspective, with emphasis on aspects of socialization. The peasant way of life is described, principally with reference to Middle Eastern communities. This book is comprised of four chapters and begins with a brief outline of some salient features of man's pre-historic and historic activities. Human evolution and early migrations are discussed, along with the different human races worldwide. The next chapter deals with the social organization of the hunting and gathering primitive groups, paying particular attention to kin groupings such as lineages and clans. The final chapter focuses on peasants and their way of life, especially in the Middle East.

Wide-ranging and inclusive, this text provides an invaluable review of an expansive selection of topics in human evolution, variation and adaptability for professionals and students in biological anthropology, evolutionary biology, medical sciences and psychology. The chapters are organized around four broad themes, with sections devoted to phenotypic and genetic variation within and between human populations, reproductive physiology and behavior, growth and development, and human health from evolutionary and ecological perspectives. An
introductory section provides readers with the historical, theoretical and methodological foundations needed to understand the more complex ideas presented later. Two hundred discussion questions provide starting points for class debate and assignments to test student understanding.

This reference dictionary takes a new approach to the study of physical anthropology by focusing on the concepts involved. Stevenson presents concise entries describing the development of physical anthropological concepts followed by bibliographies including most of the major works in the field. The history of the usage of each concept is traced from its origins--often outside the discipline of physical anthropology--to the contemporary and usually multidisciplinary contexts in which physical anthropologists participate. Entries clearly delineate both
of the concepts under discussion and their applications in physical anthropological practice.
