Carpal Tunnel Syndrome and Related Nerve Compression Syndromes

Carpal tunnel syndrome (CTS) is an overuse injury caused by repetitive strains of the median nerve, resulting in inflammation and swelling. This can cause pain, paresthesia (tingling or numbness), and weakness in the hand. Treatment involves reducing the amount of strain on the median nerve and improving blood flow to the hand. This can be achieved through exercises, lifestyle changes, and sometimes medications. If symptoms persist, surgery may be required. It is important to consult a healthcare professional for proper diagnosis and treatment.

Peripheral Nerve Lesions

Peripheral nerve lesions are caused by compression, entrapment, or injury to the peripheral nerve. Symptoms can include pain, weakness, and numbness in the affected area. Treatment options depend on the cause and extent of the injury and may include surgery, medication, or physical therapy. Early diagnosis and intervention are important to minimize long-term effects.
