Hagan and Leah Elizabeth Daigle investigate all forms of criminal activity, such as organized crime, white collar crime, political crime, and environmental crime. **Prospective Studies of Crime and Delinquency** - K.T. van Dusen - 1983-07-31

This introduction delineates what we consider to be three of the most important impediments to the advance of knowledge in the field of criminology. The most fundamental need is for more studies of the nature and progress of criminal and delinquent careers. The second need is for more prospective, longitudinal studies of the etiology of crime and delinquency. The third need concerns the lack of interdisciplinary research toward a more integrated understanding of delinquent and criminal behavior. Criminal and Delinquent Careers The birth cohort study by Wolfgang, Figlio and Sellin (1972) was heralded by many (Farrington, 1973; Erickson, 1973; Weis, 1974) as a landmark which allowed researchers to study the course of delinquency without the usual sampling biases that plagued other, cross-sectional research. For the first time, we could get a reasonable picture of when delinquency usually starts, what proportion of the population engages in

For the first time, we could get a reasonable picture of when delinquency usually starts, what proportion of the population engages in delinquency, what types of delinquencies they engage in, what proportion continue, and so on.

Cross sectional studies do not permit the investigation of careers because cross sectional sampling includes only portions of careers for many of the individuals sampled. This is just one of the many problems that restricted researchers' ability to study the nature of criminal careers.

The subject of this book, written primarily by members of the faculty of Bradford University in England, is the value of archaeological and anthropological techniques in the field of forensic science. Although not a step-by-step guide of procedures, the methods used in forensic archaeology and forensic anthropology are thoroughly discussed. Though most case examples are from the United Kingdom, the information may have world wide application. This book could be useful to a university anthropology department library, especially one called upon by law enforcement agencies to aid in locating and/or recovering and identifying human remains. It might also be a useful reference for medical examiner/coroner offices.

Examples of statistics and statistical analyses are drawn from the worlds of the practitioner as well as the policymaker and researcher. Students will also gain a clear understanding of major ethical issues in conducting statistical analyses and reporting results, as well as insight into the realities of the life of researchers and practitioners as they use statistics and statistical analyses in their day-to-day activities.
