Old Age and the Welfare State

The modern welfare state is above all a welfare state for the elderly. An overwhelming proportion of its services and benefits go to them. The current crisis of the welfare state is also, therefore, a crisis of policy concerned with the aged. The essays in this volume examine not only interventions by governments on behalf of the old, but the very basis and history of the welfare state itself. From a variety of perspectives ranging from structural functionalism to neomarxism, they examine old age policy in six advanced industrial nations -- the United States,

Contributions in the second part examine the impact of existing policies on older people. The focus of the essays on social, economic, and political aspects amounts to a new approach in gerontology that has been called by some the political economy of ageing. The Transformation of Old Age Security - Jill Quadagno - 1988-02-18
Why did the United States lag behind Germany, Britain, and Sweden in adopting a national plan for the elderly? When the Social Security Act was finally enacted in 1935, why did it depend on a class-based double standard? Why is old age welfare in the United States still less comprehensive than its European counterparts? In this sophisticated analytical chronicle of one hundred years of American welfare history, Jill Quadagno explores the curious birth of old age assistance in the United States. Grounded in historical research and informed by social science theory, the study reveals how public assistance grew from colonial-era poor laws, locally financed and administered, into a massive federal bureaucracy.

This book asks why some countries devote the lion's share of their social policy resources to the elderly, while others have a more balanced repertoire of social spending. Far from being the outcome of demands for welfare spending by powerful age-based groups in society, the 'age' of welfare is an unintended consequence of the way that social programs are set up. The way that politicians use welfare state spending to compete for votes, along either programmatic or particularistic lines, locks these early institutional choices into place. So while society is changing - aging, divorcing, moving in and out of the labor force over the life course in new ways - social policies do not evolve to catch up. The result, in occupational welfare states like Italy, the United States, and Japan, is social spending that favors the elderly and leaves...

medical advances means that more people now live longer lives than ever before in history. As a consequence, the experience of ageing has been transformed. Yet our cultural and social perceptions of ageing remain governed by increasingly dated images and narratives. Growing Old with the Welfare State challenges these stereotypes by bringing together eight previously unpublished stories of ordinary British people born between 1925 and 1945 to show contemporary ageing in a new light. These biographical narratives, six of which were written as part of the Mass Observation Project, reflect on and compare the experience of living in two post-war periods of social change, after the first and second world wars. In doing so, these stories, along with their accompanying contextual chapters, provide a valuable and accessible resource for social historians, and expose both historical and contemporary views of age and ageing that challenge modern assumptions.

Aging Welfare and Social Policy will interest policy insights into issues of housing, community care, family care, pensions and social security, and mental health as China translates and adapts Western examples, particularly those set by Norway, Sweden, and Finland. The book contrasts shared issues in the contexts of economic history, accountability and service improvements, and sustainability while also examining specifically Chinese problems such as care gaps between urban and rural elders. Coverage also considers the centrality of aging policy in China as the nation works toward its long-term goal of eradicating poverty. Included among the topics: Building a welfare system with Chinese characteristics: from a residual type to moderate universalism. “Aging in community”: historical and comparative study of aging welfare and social policy. This authoritative text offers the first comprehensive analysis of intergenerational relations and social welfare. It examines both the micro-sociological relations within the family and the social contract which forms the backbone of the welfare state.; This book is intended to appeal to undergraduates and postgraduates in sociology, social policy and medicine and it will also be particularly useful for professional courses such as nursing, social work and gerontology.

**The Winding Road to the Welfare State** -
How did Britain transform itself from a nation of workhouses to one that became a model for the modern welfare state? The Winding Road to the Welfare State investigates the evolution of living standards and welfare policies in Britain from the 1830s to 1950 and provides insights into how British working-class households coped with economic insecurity. George Boyer examines the retrenchment in Victorian poor relief, the Liberal Welfare Reforms, and the beginnings of the postwar welfare state, and he describes how workers altered spending and saving methods based on changing government policies. From the cutting back of the Poor Law after 1834 to Parliament’s abrupt about-face in 1906 with the adoption of the Liberal Welfare Reforms, Boyer offers new explanations for oscillations in Britain’s social policies and how these shaped worker well-being. The Poor Law’s increasing stinginess led skilled manual workers to adopt self-help strategies, but this was not a feasible option for low-skilled workers, many of whom continued to rely on the Poor Law into old age. In contrast, the Liberal Welfare Reforms were a major watershed, marking the end of seven decades of declining support for the needy. Concluding with the Beveridge Report and Labour’s social policies in the late 1940s, Boyer shows how the Liberal Welfare Reforms laid the foundations for a national social safety net. A sweeping look at economic pressures after the Industrial Revolution, The Winding Road to the Welfare State illustrates how British welfare policy waxed and waned over the course of a century.

Those working with older people. Part of the broader project in Britain and elsewhere to adopt new information and communications technologies (ICTs) to organise and deliver health and social welfare services. This includes mundane technologies like an alarm to call for help to complex telecare ‘smart homes’ and electronic patient records. The intended and unintended consequences of such new technologies must be explored if we are to benefit from these innovations. Based on recent research this book seeks to highlight and examine the new opportunities and dilemmas that confront older people and all those concerned with their welfare in the network society. Dramatic changes in the demographic structure of advanced countries has made providing for the old an economic and social issue of the first importance. As this set makes clear, many of the debates surrounding care for the elderly have together diverse and previously uncollected materials, the set traces the development of the debate on financial provision for the elderly population of Britain between the 1870s and the 1940s. By the late nineteenth century it was becoming clear that some form of provision for old age was necessary and the set begins with early discussions on the need to establish pensions. Next the set traces the pension debate to the turn of the century and then considers the crucial contribution of the labour movement to the introduction of old age pensions. The emphasis in the final volumes is on the changes in the regulatory environment, the emergence of non-contributory pensions schemes, and the development of the debate through the crucial period between the 1920s and the Beveridge Report. Paving the way for the central role of provision for the elderly given to the welfare state, the collection ends by raising significant economic questions concerning the costs of

**Old Age Rights** - UN. Secretary-General - 1951

This book offers a careful examination of the politics of social policy in an era of austerity and conservative governance. Focusing on the administrations of Ronald Reagan and Margaret Thatcher, Pierson provides a compelling explanation for the welfare state's durability and for the few occasions where each government was able to achieve significant cutbacks. The programmes of the modern welfare state - the 'policy legacies' of previous governments - generally proved resistant to reform. Hemmed in by the political supports that have developed around mature social programmes, conservative opponents of the welfare state were successful only when they were able to divide the supporters of social programmes, compensate

Capitalism and the Construction of Old Age -
Recent community care changes have raised fundamental issues about the changing role of the public, voluntary and informal sectors in the provision of social care to older people. They have also raised issues about the health and social care interface, the extent to which services should be rationed and the respective roles of residential care and care at home. From Poor Law to community care sets these debates in the context of the historical growth of welfare services from the outbreak of the Second World War through to the establishment of social services departments in 1971. Based on extensive research on primary sources, such as the Public Records Office and interviews with key actors, the book considers the changing perceptions of the needs of elderly people, the extent to which they have been a priority for resources and the possibilities for a policy which combines respect for elderly people with an avoidance of the exploitation of relatives. This is an updated second edition of The development of welfare services for elderly people, first published by Croom Helm, 1985. It is essential reading for practitioners and policy makers interested in gerontology, policy studies, community care and postgraduate students studying and training in a range of health and social care related professions.

It makes recommendations for a collection of new, cross-national data on aging populations' data that
