The Journal of Midshipman Chaplin

The First Kamchatka Expedition is a classic among the voyages of discovery, being famous for the discovery of the Bering Strait between Asia and North America. Chaplin's journal holds a special place among the documents of the expedition. It is the only official document that preserves its history in detail, day by day, from the author's departure from St. Petersburg on 24 January 1725 until his return to the Russian capital on 1 March 1730. The publication includes introductory articles and commentary by leading specialists, a glossary, indexes, and maps.

New Perspectives on Russian-American Relations

New Perspectives on Russian-American Relations includes eighteen articles on Russian-American relations from an international perspective. It covers diplomacy, art, trade, science, piracy, protest, and the ways this region, race, culture, and more, the essays show how the two nations related to one another across time from their first interactions as nations in the eighteenth century to the present day. The volume also includes a comprehensive timeline of the region.

Siberia - Janet M. Hartley - 2014-08-26

Larger than the area united and States and Europe combined, Siberia is a land of extremes, not merely in terms of climate and expense, but in the many kinds of lives its population has led over the course of centuries. Janet M. Hartley explores the history of this vast Russian wasteland—whose very name is a common euphemism for remoteness and isolation—through the eyes of the people who lived there. From the Cossack adventurers' first incursions into "Siber" in the late sixteenth century to the exiled criminal and political prisoners of the Soviet era to the modern era, the unrepresented Russia, Siberia describes the state's policies and population movements in the region and how the people's lives were shaped by them.

Exploring and Mapping Alaska - Alexis Postukar. - 2015-06-15

Russia first encountered Alaska in 1741 as part of the most ambitious and expensive expedition of the entire 18th century, Bering's Voyages. Among the new nations vying for dominion over the seas and the lands they embraced, Russia, like all others, needed to know where they stood, what resources they possessed, and who else was competing for them. The vast and varied islands and animals of the world's new territories required maps and cartographers, and these cartographers were frequently involved in the world's first large-scale scientific expeditions. These maps documented the chain of supply, the need to train expert navigators and cartographers, and, in the process, the chain of supply of spurious voyage accounts. For much of this era, critical geographic knowledge was kept as a state secret in Russia and not shared, even with the very navigators and cartographers who were developing much of the mapping and cartographic methodology utilized in Europe and adapted for use by Russia. Peter the Great, in the creation of an empire, wanted to know what was happening in the world. He assembled a team of cartographers and explorers to map the world for Russia, the chain of supply of ocean terrace, the need to train expert navigators and cartographers, and, in the process, the chain of supply of spurious voyage accounts. For much of this era, critical geographic knowledge was kept as a state secret in Russia. All those involved in the study of global climate change will find this book to contain a wealth of important information. All libraries in universities and research establishments where these subjects are studied and taught will need multiple copies of this book on their shelves. This is the first study in Russian or Western literature of the rise and fall of Russian naval influence in the North Pacific at large. Barratt shows that Russia's motives for early expeditions to the Pacific were to promote an inherent tension between Russian naval and mercantile interests and the origins of international rivalry in the North Pacific. Barratt and his co-author use material from previously unpublished sources. The authors carefully constructed and hugely intriguing work also contains numerous sketches, diagrams and maps which serve to further illustrate the topics addressed within the text. The extensive index shows the chronological progression of exploration and discovery in each of these works. This text is thus a valuable reference tool for students of geography and world history.

Sea Ice: Ice - David N. Thomas - 2009-11-06

As the Arctic perennial ice continues to disappear at an alarming rate, a full understanding of sea ice as a crucial global ecosystem, and the effects of its loss is vital for all those working with and studying global climate change. Building on the successes of the previous edition, the second edition of Sea Ice, now much expanded and in full colour throughout, includes all new chapters, completely revised and updated. Original contributions from the chapters included from the first edition. The Editors, Professor David Thomas and Dr Gerhard Dieckmann have once again drawn together an extremely impressive group of internationally respected contributing authors, ensuring a comprehensive worldwide coverage of this incredibly important topic. Sea ice, second edition is an essential purchase for oceanographers and marine scientists, environmental scientists, biologists, geoscientists and geographers, policy makers involved in the unfolding drama of sea ice, and for students of this incredibly important information. All libraries in universities and research establishments where these subjects are studied and taught will need multiple copies of this book on their shelves. Truly multidisciplinary approach world leading authors and editors international in scope, covering both Arctic and Antarctic work of vital interest to all those involved in global warming and climate change research highly illustrated full colour book with colour images throughout.

A History of Geographical Discovery - Edward Hoveood - 2012-01-26

This book was originally published in 1912. Its author, Edward Hoveood, was librarian for the Royal Geographic Society. Within this volume he calls for a revision of the view that the seventeenth and eighteenth centuries had relatively few “Great Geographic Discoveries”. Accordingly, this thoroughly researched work builds its argument by bringing together previously isolated narratives on geographic discovery and by giving much needed context to events and discoveries that had been treated as separate phenomena. Hoveood’s carefully constructed and hugely intriguing work also contains numerous sketches, diagrams and maps which serve to further illustrate the topics addressed within the research. In order to retain perspective, Hoveood divides the world into various terrains, each showing the chronological progression of exploration and discovery in each of these territories. This work is thus a valuable reference tool for students of geography and world history.

The book, comprising a survey of Australian exploration, is arranged in several sections with headings: "The Approach to Australia", "Exploration before Settlement, 1606–1788", "From Botany Bay to the Blue Mountains, 1788–1813", "Land and Sea Expeditions, 1813–1901." This section of the book is very fully illustrated with 18 full-colour plates and some 150 black-and-white photographs, mostly reproductions of early prints. Concluding the book are bibliographies of sources and references, a list of illustrations, and an index of explorers and ships. The comprehensive nature of this work will ensure that it becomes a valuable reference book for students, while the text and illustrations will appeal to all who are interested in our history. Collectors of Australiana will welcome this most attractive addition to the ever-increasing number of available publications.
